

Vista System - we are GREEN!

Vista System the pioneer and leading sign manufacturer in the **MCFT** market, is proud to participate in the creation of a greener sign industry by introducing an environmentally friendly system to the market.

Vista System GREEN Strategy Statement

In 2007, our design team began reviewing and redesigned most of our system to make sure it is as green as possible. The outcome is an eco-friendly signage solution that minimizes waste and allows for efficient recycling!

Vista System has been inspected & certified by Green Business Partnership, is a member of USGBC, and is an active member and education sponsor of SEGD - the Society for Environmental Graphic Design.

Longevity

When redesigning the Vista System, we placed longevity as our key concern. We concentrated on achieving sustainability via general material selection, the fabrication process, and final disposition. Successful modular systems are based on the ability to change elements of the sign while maintaining the system over a long period of time.

Materials

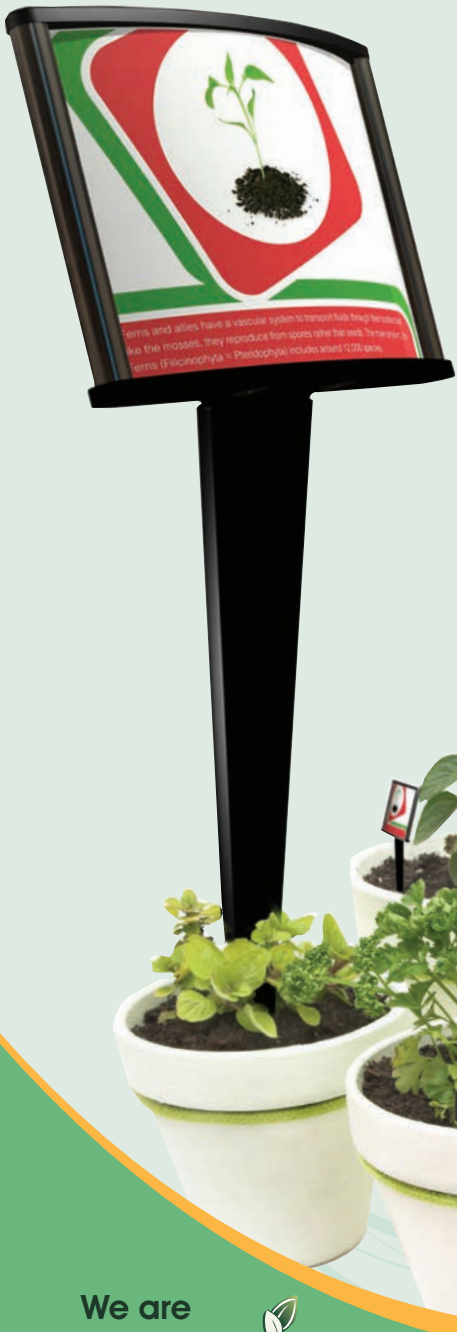

We have chosen aluminum extrusions as the basis of our system accompanied by attachment components made from aluminum and steel, which are all protected against corrosion to promote longevity. We choose to supply our plastic parts from materials such as polycarbonate for outstanding durability and resistance to vandalism.

Insert System

The frame or sign holder system allows for easy updating of the insert without the need to replace the whole sign.

Design

Designing a product that can be described over time, as having a "contemporary look" is as important as the length of time the products can physically withstand the elements.

Air & environment quality

We have chosen to use mechanical fasteners instead of harmful out-gassing adhesives. We have invested in redesigning our system to eliminate the use of adhesives for connecting components completely!

Resource and waste management

The Vista System is based on modular components that are easy to separate into individual elements that can be taken apart and reused or sent for recycling. We have challenged our designers to come up with solutions that are both pleasing to the eye and fully recyclable. We reuse packing materials as much as possible, recycle the materials that are not reusable and finally, introduced recyclable, lightweight cardboard-based pallets, which have replaced the majority of wooden pallets used thus far.

Energy Efficiency

We have recently redesigned all of our extrusions to reduce their weight to the minimum necessary without jeopardizing the integrity of the product. This reduction in material reduces the use of energy used in the manufacturing process, transportation and the eventual aluminum recycling process. Vista System, being a frame-based system, allows for the use of many types of substrates. This gives great flexibility to choose the most energy efficient substrate materials available now and in the future.
